

Find-it

- Version 3.1, Type 1 -

Please read before using:

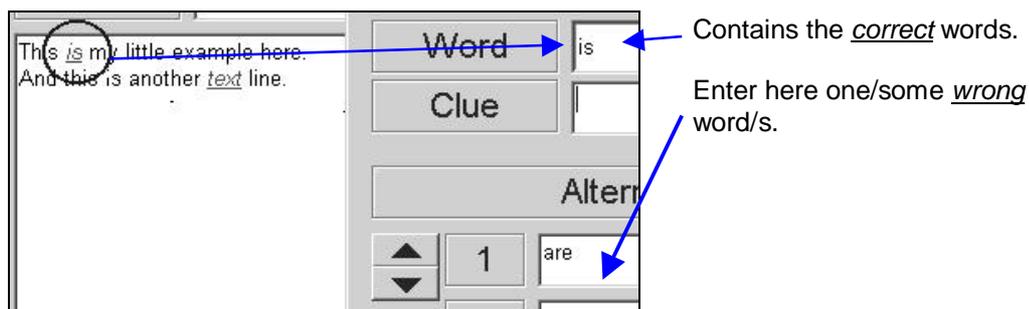

1. What files do I need ?

- jcloze6.ht_ (Output 6)
- jcloze6.js_

Create a new folder (e.g. **/Find_it/**) and extract the zip file into it.

2. How do I create *Find-it* - exercises ?

- Open JCloze and enter your text as usually; gap words as usually, too.
ATTENTION: Each gap contains the correct word!
- Select some text and make a **gap**.
- Each gap can have one or more wrong words – enter them into the „*alternate correct answer*“ boxes; if there is more than one wrong word for a gap one word will be chosen by random to display (each time the exercise loads).

- Each gap can have (optionally) an explanation why there's a mistake (or anything else as explanation). Enter such an explanation into the **CLUE** field. This further information will be shown if the error is found (to see the explanation click on the correct word).
- Pay attention to the following:

-- Prompts / Feedback :

Titles/Instructions	Prompts/Feedback	Buttons	App
Correct:	Correct! Well done.##Great!!## Cool! Go on!		
Some answers incorrect:	Sorry, that's incorrect.##That's wrong!		
Next correct letter added:	All errors found. Congratulations !!!!		
Your score is:	Number of remaining mistakes:		
<input type="checkbox"/> Include word list with text <input type="checkbox"/> Make answer-checking case-sensitive			

Input here the following feedback:

- Feedback for a correct found mistake *
- Feedback, if the student did not find a mistake *
- Feedback for all found mistakes
- Number of not found mistakes in the text
- * If you enter more than one feedback item – separated by ## - each time a feedback is displayed one item will be selected randomly.
- These two options *don't* influence your website in any kind.

-- Buttons

The **Check**-Button will not be used.
The **OK**-Button will be used in output version 6 for the feedback popup.

The **Clue**-Button is not used.

The **Hint**-Button is optional and includes the functionality of showing the solution.

Buttons configuration window showing options for button captions and checkboxes:

- Buttons
- Appearance
- Reading
- Other
- CGI
- Include "Hint" button
- Include "Clue" button for each gap
- Caption for "Check Answer" button: Check
- Caption for "OK" button: OK
- Caption: Solution
- Caption:

-- All other tabsheets can be configured as usually.

3. How do I create my HTML-page ?

- Press the **Shift + Control + ALT + S** keys *simultaneously*.

You should see the window on the right:

Choose the folder where you have saved the source files.
Press the OK-key or Return-key.

- Now create your web-exercise: **F6** or the appropriate menu item.
- That's it !!!

**4. What should I do after creating my exercise ?**

- Press the **Shift + Control + ALT + T** keys *simultaneously*.
- Why ?

Next time the JCloze programme is loaded, it tries to find all the needed files within the subfolder of the modified source-files – but without success; you would get an error message.

If you do forget it and get an error message when you open the programme, *don't* be worried about it: just confirm the error message(s) by pressing the OK button – after that the programme will be opened and you can create your exercises as usually; the Hot Potatoes programme has searched for and then loaded all the original source files which are delivered by Martin Holmes and Stewart Arneil.
